## gel levelling table

The Gel Levelling Table provides a useful way of pouring gels of uniform thickness. The table features a large 32 x 26cm platform with large thumb-wheel levelling feet at each corner. A levelling bubble is supplied.

## buffer saver blocks

Buffer saver blocks physically reduce the volume in positive and negative compartments of a gel chamber and so reduces buffer requirements, saving cost. Blocks are available for all multiSUB Horizontal Gel Units.

## combi-comb/loading guides

- Colour coded for thickness
- Comb and guide in one piece for convenience
- Adjustable height

These guides combine the convenience of a regular comb with the appropriate guide (same teeth number and width) for loading samples, simply flip over.

## runFAST high efficiency horizontal gel cooling

- Effective cooling
- Cools without external chilling systems
- Improves gel resolution and reduces run times

Comprising a removable Gel Platform and CoolPack the unique runFAST system will cool the buffer chamber of multiSUB horizontal gel units without any external chilling. Simply place the platform over the running tray and place a pre-chilled CoolPack on top. This allows the CoolPack to sit above the gel in buffer directly removing any heat generated.

## gel rulers

- Sharp, clear, easily visible markings
- For use with ethidium bromide gels
- Ideal for gel presentation
